

Team Introduction

Team Name: SentinelX

About Our Team

We are a team of three passionate engineering students from **Renganayagi Varatharaj College of Engineering (RVCE), Sivakasi, Tamil Nadu**. We are committed to developing innovative, practical, and technology-driven solutions that address real-world challenges. Our team combines expertise from **Electronics and Communication Engineering (ECE)** and **Electrical and Electronics Engineering (EEE)**, enabling us to design intelligent systems that integrate hardware, software, and artificial intelligence.

Through teamwork, continuous learning, and creative problem-solving, we strive to build impactful solutions that contribute to society and demonstrate our engineering skills.

Team Members

1. Harish Raj G

Department: Electronics and Communication Engineering (ECE)

Harish Raj is passionate about Artificial Intelligence, IoT, Embedded Systems, and Full Stack Development. He enjoys building smart applications that combine hardware and software to solve real-world problems. His interests include AI-powered automation, web technologies, and innovative product development.

2. Siranjeevi K

Department: Electronics and Communication Engineering (ECE)

Siranjeevi is enthusiastic about Embedded Systems, Electronics Design, and IoT technologies. He focuses on developing reliable hardware solutions and enjoys working on sensor-based automation projects. His problem-solving skills and technical knowledge contribute significantly to the team's development process.

3. Suresh V

Department: Electrical and Electronics Engineering (EEE)

Suresh specializes in Electrical and Electronics Engineering with a strong interest in power systems, automation, and intelligent electrical solutions. He contributes to system integration, electrical design, and hardware implementation, ensuring efficient and dependable project execution.

Our Vision

Our vision is to develop innovative, AI-powered engineering solutions that improve safety, efficiency, and sustainability. We believe in leveraging emerging technologies to solve real-world problems while continuously enhancing our technical skills and contributing to society through innovation.
